

## Enbridge's Employee Vanpool Program

### How do you reduce your commuting costs and improve the environment while driving to work?

Enbridge Gas Distribution has found the solution in its employee vanpool program.

Enbridge operates eight employee vanpools serving workers at the Victoria Park Head Office in Toronto.

This initiative is consistent with the Company's efforts to be environmentally innovative and support the use of natural gas as a transportation fuel.

The eight employee vanpools use natural gas-powered full-size passenger vans operating out of Mississauga, Brampton, Barrie, Newmarket, Courtice, Durham, Oshawa and Keswick. With its full complement of eight passengers and a driver, the vanpool is taking the equivalent of 5,500 person kilometers per day off the road. Imagine: that's a vehicle traveling from Quebec City to Vancouver that has been taken off the road, every day!

This also results in greenhouse gas benefits by preventing the release of about 262 tonnes of

carbon dioxide (CO<sub>2</sub>) emissions each year. Clean burning natural gas creates far less greenhouse gas emissions than gasoline and also costs much less.

Employees benefit by reducing their vehicle fuel and maintenance costs, less stress, more rest, excellent company during the commute, preferred parking at the Enbridge office, company driver training to become a better driver and

the pride in knowing that they are doing their part for the environment.

If you are interested in setting up a natural gas-powered vanpool for your company's employees, we can help. Enbridge's vanpool rider agreement is available online at [www.ngvontario.com](http://www.ngvontario.com).
