

Testimonials from Enbridge's NGV Customers

Mulmer Services Ltd.

Paul Richey, President of Mulmer Services Ltd., operates a fleet of 25 buses ranging in size from 20 to 40 passengers that specializes in customized shuttle bus service in the Greater Toronto Area.

Since the fall of 2007 Mulmer has "gone green" with the conversion of their first three natural gas shuttle

buses which refuel at retail Shell stations in the City of Toronto.

"It is important to my customers that there are substantial and tangible environmental benefits from using natural gas as a fuel in our buses," says Paul.

Niagara Classic Cars Ltd.

For owner Ian Mole's transportation company, public relations are a key element to running a successful business. The Niagara-based enterprise operates four NGV buses that service Para-transit, winery tours, weddings and regional tourism.

Ian Mole sums up the environmental benefit experience as, "Much cleaner, quieter than diesel which is a very important issue here in Niagara-on-the-Lake. We are focused on serving an older population with many

tourists from U.S. and Europe. They are very environmentally sensitive and appreciate the difference natural gas makes."

Furthermore, Ian states, "Our experience has been positive. We are learning best practices and believe the natural gas component will give us a competitive advantage as we expand our business here in Niagara."

Canco ClimateCare Heating and Air Conditioning

Canco has operated three GM cargo vans on natural gas out of their Newmarket facility for the past 18 months.

President Bob McKeraghan states, "The use of this fuel has given us a competitive advantage in the marketplace. All of our refuelling costs in (rental, electrical, etc...) total are less than \$.70 per litre gasoline equivalent compared to gasoline at the pumps up to \$1.32 last summer.

A typical range per fill-up is 150 kilometers and since the vehicles are bi-fuelled we can increase our overall range when necessary." He continues, "As natural gas is a cleaner fuel, vehicle maintenance costs have been reduced with less engine wear. It is also good to know that we are being an environmentally responsible company by reducing our carbon footprint."

Morningstar Shuttle

Morningstar Shuttle is in a very competitive business which provides contract customer shuttle services from GTA Hotels to Pearson International Airport. It is for that reason that owner Samuel Gori chose natural gas when purchasing his latest two shuttle vans.

Samuel describes the importance of his NGVs as, "I would have been losing money on my service when fuel prices

passed \$1.20 per gasoline litre and during that time I saved up to 40% on my fuel costs." He continues, "Public image is so important in our business and by promoting the clean emissions of natural gas we are contributing our environmental part for the planet."
